Köpekler ekranın üst kısmında yumurtluyor.Spawn Manager dan topları ayarlayalım :

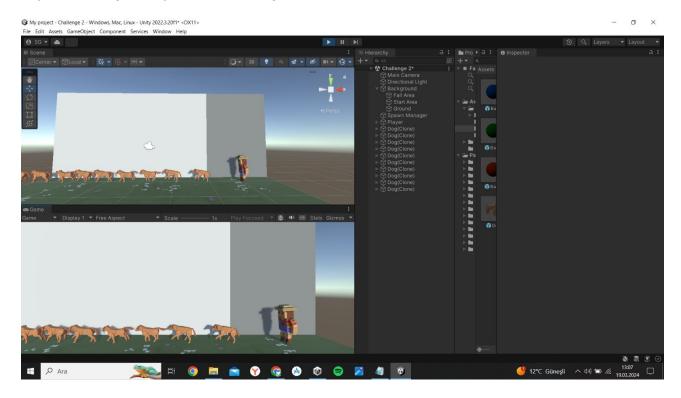

Oyuncunun köpekleri doğurmasını sağlayalım..

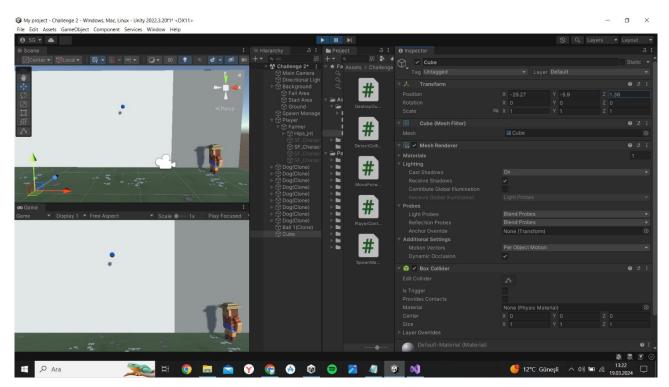

(projeye yeniden başlatdı)

Space tuşuyla köpekleri çıkartıyoruz

Tek tür toplar çıkıyor

İlk olarak, kod transform.position.x ile objenin X pozisyonunu kontrol eder. Eğer bu pozisyon, leftLimit değişkeninden daha küçükse (yani obje soldaki sınırın soluna geçmişse), o zaman bu GameObject yok edilir:

Ardından, bir else if bloğu ile objenin Y pozisyonunu kontrol eder. Eğer bu pozisyon, bottonLimit değişkeninden daha küçükse (yani obje alttaki sınırın altına düşmüşse), o zaman bu GameObject de yok edilir

Bu kod, belirli sınırların altında kalan objeleri yok etmek için kullanılır. leftLimit ve bottonLimit değişkenleri, objenin hangi pozisyonlarda yok edileceğini belirlemek için kullanılan sınırlar olacaktır. Örneğin, leftLimit objenin soldaki sınırını belirtirken, bottonLimit objenin alttaki sınırını belirtir. Bu kod, bir oyun sahnesinde köpekler veya toplar gibi objelerin belirli sınırların altına düşmesi durumunda onları yok etmek için kullanılabilir.

```
private float leftLimit = -30;
private float bottomLimit = -5;

// Update is called once per frame
@ Unity Message | Oreferences
void Update()
{
    // Destroy dogs if x position less than left limit

    if (transform.position.x < leftLimit)

        Destroy(gameObject);
    }

    // Destroy balls if y position is less than bottomLimit
    else if (transform.position.z < bottomLimit)
        {
            Destroy(gameObject);
        }
    }
}</pre>
```

Toplar Rastgele Oluşmaktadır

```

```

Unity'de belirli aralıklarla ve belirli sınırlar içinde rastgele bir top oluşturmayı sağlayan bir script'i temsil ediyor. Şimdi her bir parçayı ayrıntılı olarak inceleyelim:

Bu kod, Unity oyun motorunda bir köpek prefabını belirli bir gecikmeyle ateşlemeyi sağlar. İşlevleri şu şekildedir:
